Experiment No. 6

Aim: To implement Jenkins Master-Slave Architecture with Scaling.

Theory:

Need of Jenkins Mater-[Agent-slave] Architecture:

When we build the Jenkins job in a single Jenkins master node then Jenkins uses the resource of the base machine and if no executor is available then the jobs are queued in the Jenkins server. Sometimes you might need several different environments to test your builds. This cannot be done by a single Jenkins server. It is recommended not to run different jobs in the same system that required a different environment. In such scenarios where we need a different machine with a different environment that takes the specific job from the master to build.

On the same Jenkins setup, multiple teams are working with their jobs. All jobs are running on the same base operating system and the base operating system has limited resources. Also, we don't want to put our personal data on the same system where other teams can read.

Jenkins Distributed Architecture:

Jenkins uses A Master-Slave architecture to manage distributed builds. The machine where we install Jenkins software will be Jenkins master and that run's on port 8080 by default. On the slave machine, we install a program called Agent. This agent requires JVM. This agent executes the tasks provided by Jenkins master. We can launch n numbers of agents and we can configure whichtask will be run on which agent server from Jenkins master by assigning the agent to the task.
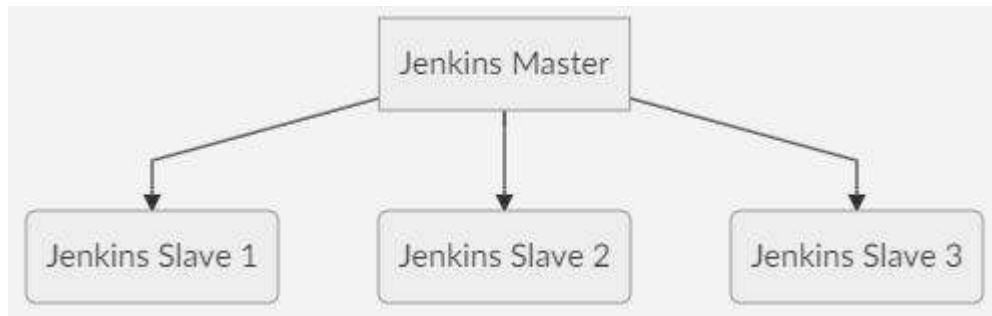

Jenkins Master and Slave Concept

A Jenkins master comes with the basic installation of Jenkins, and in this configuration, the master handles all the tasks for our build system.

If we are working on multiple projects, we may run multiple jobs on each project. Some projects need to run on some nodes, and in this process, we need to configure slaves. Jenkins slaves connect to the Jenkins master using the Java Network Launch Protocol(JNLP).

The Jenkins master acts to schedule the jobs, assign slaves, and send builds to slaves to execute the jobs.

It will also monitor the slave state (offline or online) and get back the build result responses from slaves and the display build results on the console output. The workload of building jobs is delegated to multiple **slaves**.

Steps to Configure Jenkins Master and Slave Nodes

STEP1: In Jenkins Dashboard Click on Manage Jenkins -> Manage Nodes

STEP 2: Select New Node and enter the name of the node in the Node Name field.

Select Permanent Agent and click the OK button. Initially, you will get only one option, "Permanent Agent." Once we have one or more slaves you will get the "Copy Existing Node" option. Click Create

STEP3: Configure node with below details:

Under 'Node Properties', provide jdk path.

Node Properties

- [ ] **Disable deferred wipeout on this node** ?
- [ ] **Disk Space Monitoring Thresholds**
- [x] **Environment variables**

  List of variables ?

  Name

  java_home

  Value

  /usr/lib/jvm/java-11-openjdk-amd64/bin/java

  Add

- [ ] **Tool Locations**

Save

Jenkins

Search (CTRL+K) SUJATA OAK log out

Dashboard > Manage Jenkins > Nodes >

Nodes

Clouds

Nodes

+ New Node   Configure Monitors

Build Queue

No builds in the queue.

Build Executor Status

built-in node + 2 agents (0 of 2 executors busy)

S	Name ↓	Architecture	Clock Difference	Free Disk Space	Free Swap Space	Free Temp Space	Response Time	
	agent1	Linux (amd64)	In sync	5.88 GiB	923.26 MiB	5.88 GiB	189ms	⚙
	agent2		N/A	N/A	N/A	N/A	N/A	⚙
	Built-In Node	Linux (amd64)	In sync	5.88 GiB	923.26 MiB	5.88 GiB	0ms	⚙
	Data obtained	21 sec	21 sec	21 sec	21 sec	21 sec	21 sec	

Icon: S M L   Legend

STEP4: On click of 'Save' will display the below page with error message. Here Jenkins connect with Slave node using Java Web Start and it needs a port to establish the connection.

To configure JNLP port in global security. Now goto Manage Jenkins -> Security

Agents

TCP port for inbound agents ?

● Fixed

| 50000 |

○ Random

○ Disable

This port has to be allowed to access across firewall, so from Master terminal run the below command,

sudo ufw allow 50000/tcp

This command will allow port 50000 to listen for request.

```
root@Ubuntu:/home/sujata/Desktop/JENKINS_LAB# sudo ufw allow 50000/tcp
Rule added
Rule added (v6)
```

STEP5: Again coming back to Jenkins and navigate to Nodes -> agent2 which will display two ways to connect with Agent node.

Dashboard > Manage Jenkins > Nodes > agent2

Agent agent2

Status | Delete Agent | Configure | Build History | Load Statistics | Log

This is a demo on Master-Slave Jenkins

Mark this node temporarily offline

Edit description

Run from agent command line: (Unix)

```
curl -sO http://127.0.0.1:8080/jnlpJars/agent.jar
java -jar agent.jar -url http://127.0.0.1:8080/ -secret cacd8d769874ea4f1a2a28392ffe62d08addd0eeb0ea463cced99fa1f707fad0 -name agent2 -workDir "/home/sujata/Desktop/JENKINS_LAB"
```

Compiled By: Prof. Sujata Oak

To establish connection, run the below command

```
root@Ubuntu:/home/sujata/Desktop/JENKINS_LAB# curl -sO http://127.0.0.1:8080/jnlpJars/agent.jar
```

```
root@Ubuntu:/home/sujata/Desktop/JENKINS_LAB# java -jar agent.jar -url http://127.0.0.1:8080/ -secret cacd8d769874ea4f1a2a28392
ffe62d08addd0eeb0ea463cced99fa1f707fad0 -name agent2 -workDir "/home/sujata/Desktop/JENKINS_LAB"
```

OUTPUT:

```
INFO: Both error and output logs will be printed to /home/sujata/Desktop/JENKINS_LAB/remoting

INFO: Connected
```

This will establish connection with the configured Slave node.

Now Jenkins Slave node is ready to run any job. This node's label name should be mentioned in the corresponding Job configuration as below:

STEP 6: Create a New Job in Jenkins dashboard

STEP 7: Configure the page with following:

Dashboard > master_slave_jenkins_demo20082024 > Configuration

Configure

Description

Demo On Jenkins Master Slave architecture

- ⚙ General
- ⅄ Source Code Management
- ⏱ Build Triggers
- 🌐 Build Environment
- ☰ Build Steps
- 🎁 Post-build Actions

Plain text **Preview**

☐ Discard old builds ?

☐ GitHub project

☐ This project is parameterized ?

☐ Throttle builds ?

☐ Execute concurrent builds if necessary ?

☑ Restrict where this project can be run ?

Label Expression ?

agent2

Build Steps

☰ **Execute shell** ?   ✕

Command

See **the list of available environment variables**

```
echo " Hello Students, Welcome to session on MASTER SLAVE ARCHITECTURE IN JENKINS!!!"
```

Save   **Apply**

Click on Build-Now, Console Output

STEP 8: Goto Jenkins Dashboard->Manage Jenkins->Nodes->agent2

Conclusion: This way we could connect with many machines as Slave nodes with different environment and execute our Jenkins jobs.
